

Media Wrangling

You have a large project (or many small projects), with media on multiple drives, in multiple folders, (*Gone Girl*: 500hrs 38TB editing, 342TB storage) and you need to:

- **Move or consolidate your media** – during/after a job
 - Eg. Prep Media for Color Correction
- **Get rid of unused media** – during/after a job
- **Transcode/Make Offline versions of media** – before/during a job
- **Re-Name clips on your storage drives** – during a job
- **Purge files from a project off of your drives** – after a job

BEFORE DELETING:

- Remember clips might be used in multiple projects –
be very, very careful before hitting the delete key...
(not to mention Rested & Relaxed)
- FCP Media Manager does not delete media or render files
 - Can move them, but not delete them – (move then delete)
 - Use “Make Offline” in Project Window instead

ETC:

- Removing Subclip Limits
- **Deliverables** – we need to talk...
